

Solution of assignment 3.

4.2

a)

$$y = 1, 3, 4, 6, 7, 9, 10$$

$$y(t) = \begin{cases} t & \text{if } t = 3k \text{ for } k \in \mathcal{N} \\ t & \text{if } t = 3k+1 \text{ for } k \in \mathcal{N} \cup \{0\} \\ \text{absent} & \text{otherwise} \end{cases}$$

b)

$$(y(t)=1) \wedge (\sim \text{reset}) / s(t)$$

$$r(t) := 0$$

$$s(0) := 0$$

$$r(0) := 0$$

5.2

$$\text{States}_C = \text{States}_A \times \text{States}_B$$

$$\text{Inputs}_C = \text{Inputs}_A \times \text{Inputs}_B$$

$$\text{Outputs}_C = \text{Outputs}_A \times \text{Outputs}_B$$

$$\text{InitialState}_C = (\text{InitialState}_A, \text{InitialState}_B)$$

$$\text{update function}_C((s_A, s_B), (i_A, i_B)) = ((s'_A, s'_B), (o'_A, o'_B))$$

$$(s'_A, o'_A) = \text{update function}_C(s_A, i_A) \text{ and } \begin{cases} s'_B = s_B \\ o'_B = \text{absent} \end{cases}$$

$$(s'_B, o'_B) = \text{update function}_C(s_B, i_B) \text{ and } \begin{cases} s'_A = s_A \\ o'_A = \text{absent} \end{cases}$$

- for all $s_A \in \text{States}_A$
- $s_B \in \text{States}_B$
- $i_A \in \text{Inputs}_A$
- $i_B \in \text{Inputs}_B$
